

IN THE SPECIFICATION:

Please amend page 6, first full paragraph, as follows:

The implant in the providing step may include a reservoir disposed within the collagenous matrix, the reservoir containing a volume of the dye/pigment and the causing step may include a step of breaching the reservoir to release the dye/pigment. The breaching step may include a step of squeezing the implanted post-biopsy cavity treatment implant. The causing step may include a step of waiting for a predetermined period of time during which the implant degrades within the cavity and releases the dye/pigment. The dye and/or pigment may be loaded within the collagenous matrix of the implant. The selected visualizing mode in the visualizing step may include ultrasound, X-ray, MRI, elastography, and/or microwave ~~and/or the unaided eye~~, for example.
